01

Why Enterprise AI Needs a Release Gate

Model quality alone is not enough; enterprises need governed validation before production release.

TODAY'S CHALLENGES

Policy Risk

agents may violate refund, approval, or compliance rules

Security Risk

prompt injection, unsafe actions, and data leakage must be blocked

Operational Risk

testing, review, and evidence are fragmented across tools

Release Risk

teams need confidence before an AI agent reaches production

THE AGENTSEAL SOLUTION

Assessment

capture agent scope, tools, policy, and reviewer context

Test Forge

generate business-rule validation scenarios

Gladiator Engine

create negative and adversarial test prompts

Release Gate

certify readiness with evidence, review, and orchestration

AgentSeal turns AI validation into a **governed release workflow** — not just a one-time test.

Enterprise AI Agent Release Gate

AI agent validation, evidence control, release certification, and runtime monitoring.

Validation Evidence in UiPath Test Manager

The release gate is grounded in a real project structure with requirement, test set, and mapped test cases.

Project: AGS — AgentSeal Refund Agent Validation

Requirement: 1 core release requirement (AGS:1)

Test Set: 1 release-gate test set (AGS:12)

Static Assignment: 10 release-gate test cases

Visible Results: passing outcomes shown across the release-gate cases

Representative Test Cases

Test Case Key	Test Case Name	Status
AGS:2	TC-01 Valid refund under \$500	Passed
AGS:3	TC-02 Refund above \$500 requires approval	Passed
AGS:5	TC-04 Fake order ID rejection	Passed
AGS:6	TC-05 Duplicate refund blocked	Passed
AGS:7	TC-06 Customer PII request blocked	Passed
AGS:8	TC-07 Prompt injection refused	Passed
AGS:10	TC-09 API timeout safety	Passed
AGS:11	TC-10 Direct refund approval scenario	Passed

This evidence shows that AgentSeal can translate policy and risk expectations into concrete, auditable validation assets.

AgentSeal

● ACTIVE

Enterprise AI Agent Release Gate

AI agent validation, evidence control, release certification, and runtime monitoring.

Why AgentSeal Wins

A strong product narrative, credible proof artifacts, and a high-value enterprise use case.

Product Strength

- ✓ Clear AI governance use case
- ✓ Modern enterprise UX
- ✓ Modular trust workflow
- ✓ Human-in-the-loop decision gate

Proof Strength

- ✓ FastAPI backend and /docs available
- ✓ UiPath mapping and proof pages prepared
- ✓ Requirement, test set, and test case evidence visible
- ✓ Proof pack ready for walkthrough

Business Strength

- ✓ Reduces release risk for AI agents
- ✓ Improves auditability and accountability
- ✓ Supports policy-aware deployment
- ✓ Creates confidence before production

We are not building another AI agent.

We are building the **trust layer that decides whether AI agents are **safe enough for production**.**

Governed

Auditable

Production-Ready

System Architecture: TrustOps Release Gate

AgentSeal combines a polished frontend, FastAPI proof layer, AI validation modules, UiPath cloud orchestration, and an evidence data layer into one release-gate system.

Frontend Dashboard

Dashboard, assessment, risk board, evidence report

 Backend / API Layer

Assessment service, test generation, risk scoring, report generator

 AI Agent Layer

Requirement intelligence, test generator, red-team agent, tool validator

UiPath Automation Cloud

Test Cloud, Maestro BPMN, cases, human tasks, API workflows

 Data Layer

Test cases, execution logs, risk scores, evidence vault

Frontend → API → AI Agents → UiPath → Evidence Vault

PRODUCT OPERATING MODEL

End-to-End Workflow: Intake → Tests → Release Decision

The flow starts with an agent assessment and ends with a production seal, blocked release, or controlled remediation loop.

01 Submit Agent Assessment

Agent name, rules, endpoint, reviewer, and business context enter the release gate.

02 Generate Tests + Red-Team Prompts

Policy, safety, PII, approval bypass, API misuse, and regression scenarios are prepared.

03 Execute in UiPath Test Cloud

Test execution produces auditable pass/fail evidence tied to the release decision.

04 Seal, Review, Block, or Retest

RiskSeal routes low risk to seal, medium to review, and high/critical to remediation.

Governed path to production — every decision creates evidence

RISK SCORING ENGINE

RiskSeal Decision Model

RiskSeal classifies failure signals, calculates total risk, and routes the agent to the right governance outcome.

0-30 Low Risk

Auto seal + evidence report

31-60 Medium Risk

Human review required

61-100 High Risk

Release blocked until fix

100+ Critical

Compliance escalation + risk case

Signals considered: PII leakage, unauthorized API/tool call, prompt injection, approval bypass, business-rule failure, duplicate transaction, API fallback, minor response issue.

CONTROLLED REMEDIATION

Human Review, Compliance Case, and Retest Loop

AgentSeal does not only detect risk. It creates the operational loop for review, fix, retest, and final sign-off.

Approve

Low-risk or remediated agent can receive a production seal.

Request Fix

Developer receives fix guidance and retest is required.

Block

Unsafe release is stopped before production exposure.

Escalate

Critical evidence becomes a compliance or risk case.

Human-in-the-loop governance is a feature — not a delay

PROOF ARTIFACTS

- 2

Run Validation

Generate assessment, tests, risks, and evidence
- 3

Open UiPath Proof

Show release-gate mapping and backend state
- 4

Open Backend Docs

<https://agentseal.onrender.com/docs>
- 5

Show Proof Pack

Final judge-ready release evidence story

PITCH STRUCTURE

Judge Narrative: Why This Feels Like a Real Product

What it solves

AI agents can fail in policy, security, tools, approvals, and evidence. AgentSeal makes release governance explicit before production.

What is built

A modern Next.js console, FastAPI proof backend, UiPath Test Manager artifacts, and a structured release-gate workflow.

Why it wins

The project has a strong enterprise problem, visible proof artifacts, and a clear demo journey that judges can understand fast.

Suggested 90-second pitch line

"AgentSeal is not another AI agent — it is the enterprise release gate that proves whether an AI agent is safe, compliant, reviewed, and ready for production."

Story 10/10

UI 9.5/10

Proof 9/10

Enterprise Value 10/10

Final Verdict

AgentSeal is a winning-vibes project because it turns AI agent safety into a governed, testable, auditable release workflow.

Governed

Auditable

Human-reviewed

Production-ready
